

ARGO Medical Technologies Ltd. announces that the ReWalk™ has received the CE-Mark.

YOKNEAM ILLIT, ISRAEL – ARGO Medical Technologies, Ltd., a pioneer in development of exoskeleton walking restore systems, announced today that it has received CE Mark approval to market its ReWalk™ system in the European Union. ARGO Medical Technologies, Ltd also received ISO 9001 and ISO 13485 certification for the development, manufacturing and marketing of their ReWalk™ system.

Since the beginning of the development of the ReWalk, many prototypes and trial versions have been constructed, build and tested.

Following the successful trials in Israel, in the USA and in Italy, ARGO Medical Technologies Ltd. is now happy to announce the CE Certification for the ReWalk.

We are really happy that we received the CE-Mark, says Dr. Amit Goffer, CEO and founder of ARGO. Since we have started the development of the ReWalk we have received hundreds enquiries from institutions from all over the world, interested in this unique and life changing technology. With this certification we can start to deliver the ReWalk and help care givers to get their patients out of the wheelchair, on their feet and walking.

The CE Mark was one of the missing ingredients to make the ReWalk commercially available. Following the certification, ARGO Medical Technologies Ltd. will now start the production and commercialization of the institutional version of the ReWalk which will be available by October 2010.
